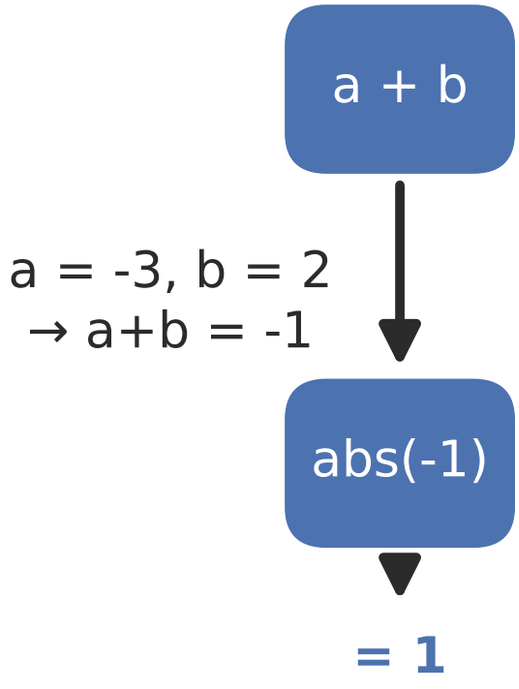
SAME OPERATORS, DIFFERENT PROGRAMS

Knowing the operators does not fix the order in which they are applied.

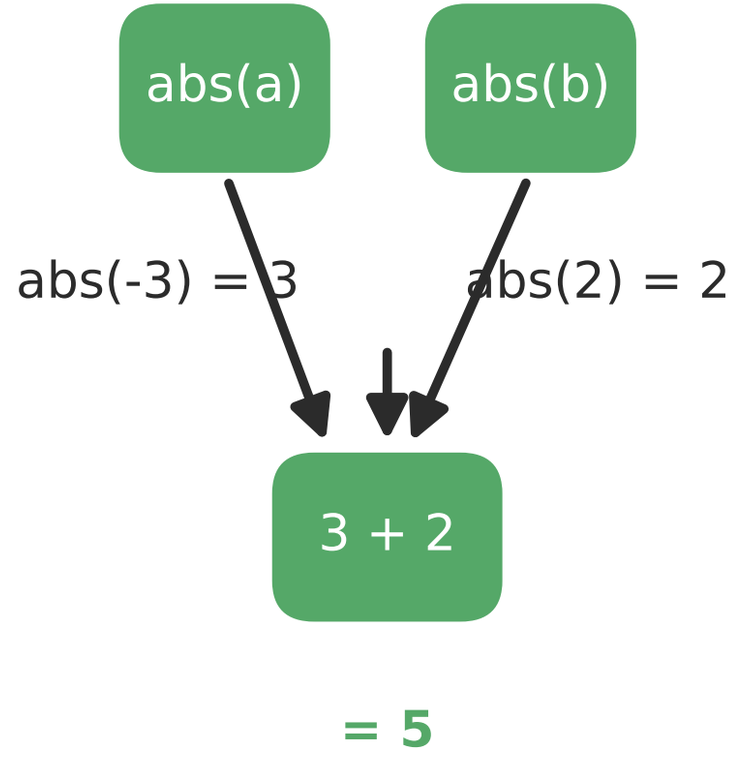
abs(a + b)

absolute value of the sum



abs(a) + abs(b)

sum of the absolute values (this is abs_add)



These are mathematically different functions (outputs 1 vs 5 for the same input). The composite in this book, abs_add, is the right-hand one: abs(a) + abs(b).
