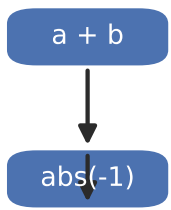
## SAME OPERATORS, DIFFERENT PROGRAMS

Knowing the operators does not fix the order in which they are applied.

**abs(a + b)**

absolute value of the sum

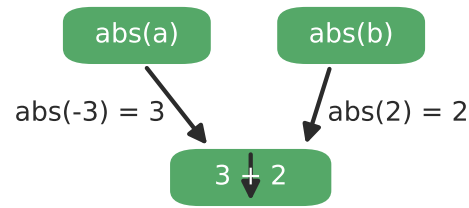
a = -3, b = 2
→ a+b = -1



**= 1**

**abs(a) + abs(b)**

sum of the absolute values  (this is abs_add)



**= 5**

*These are mathematically different functions (outputs 1 vs 5 for the same input). The composite in this book, abs_add, is the right-hand one: abs(a) + abs(b).*
