ONE TASK, THREE MEANINGS OF 'NEW'

What is actually new to the MODEL INPUT? (green = new to model; grey = not)

case	prompt	target program	hidden tests	new to model input?
1. New task ID, same prompt + program	same	same	different	NO

only the evaluator's hidden tests change
-- NOT a new example for the model

2. New prompt, same target program	different	same	same	YES

a new surface, same computation
-- genuinely a new model input

3. Unseen program structure	different	different	different	YES

composing pieces never combined
-- new input AND new target structure

A 'new task ID' that only changes the hidden tests is NOT a new model input.
Report prompt/program novelty, not just task-ID counts.
